

INCOMPARABLE DESIGN & UNRIVALED INNOVATION

MAXIMUM TORQUE FOR MAXIMUM PERFORMANCE

Premiere Torque Rings (PTR™) are an innovative, patented technology that provide premium connection performance at a significantly reduced cost. By creating a positive shoulder, API pipe can be run, and rotated at a significantly greater torque.

FEATURES

Balances Connection

A balanced connection virtually eliminates hoops stress, it ensures against any tension or buckling in the coupling during makeup and through downhole activity.

Tool-less Installation

PTR's are quickly installed on location or pipe yard, the only tool-less installed ring on the market gives the customer freedom of contingency if high torques aren't needed.

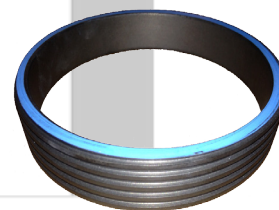

API Quality Materials

Torque rings are available in a variety of sizes and are composed of the highest grade of steel to match your casing needs.

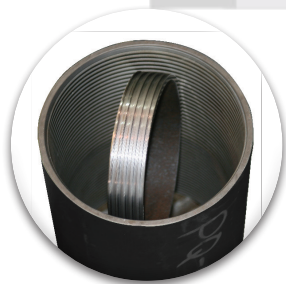

Built for Strength

The perfectly circular, non-stressed design results in a considerably stronger product than competing oblong torque rings.

100% Metal Engagement

Patented threaded outer diameter provides greater cross sectional area, Premiere Torque Rings often result in 2x-6x the torque of a standard API connection.

Helps Prevent Collar Failure Due to Fracking
Creates a constant and smooth ID which helps eliminate any coupling failures due to washout from corrosive hydraulic frack fluids.
